

Research Topic: “Factors affecting students’ use of digital payment methods”

(All students are required to use the following topic for all parts of the assignment)

Task 1. Literature Search Strategy

The first task focuses on learning how to plan a literature search before searching for academic articles.

Students are required to write a short report of approximately 300–400 words, in which they should:

1.1. Explain the research topic in their own words.

Describe what *digital payment methods* are and why students’ use of digital payments is important in today’s financial system.

1.2. Identify five to seven keywords related to the topic.

Examples may include: *digital payment, mobile payment, e-wallet, cashless payment, financial technology, student payment behavior.*

1.3. Choose two appropriate search sources, such as Google Scholar or the university library database, and briefly explain why these sources are suitable for this topic.

1.4. Define basic search limits, including the publication period (for example, 2015–2024) and English-language articles only.

Task 2. Conducting the Literature Search

The second task requires students to conduct an actual literature search and summarize relevant academic studies.

Using the search strategy developed in Task 1, students must:

2.1. Use Google Scholar to search for academic articles related to students’ use of digital payment methods.

2.2. Select three to five academic articles, such as journal articles or review papers. Non-academic sources (blogs, newspapers, websites) are not allowed.

2.3. For each selected article, summarize:

- Author(s) and year of publication
- Purpose of the study
- Main findings

2.4. Present the summaries in a table using the following format:

Author & Year	Purpose of Study	Main Finding
---------------	------------------	--------------

Task 3. Writing a Short Literature Review

The final task requires students to write a short literature review based on the articles collected in Task 2.

Students must write approximately 600–800 words and should:

- 3.1. Write an introduction that briefly introduces digital payment methods and explains why this topic is important for students and the financial sector.
- 3.2. Write a main body that summarizes what previous studies have found. Students should organize ideas by similar factors (for example, convenience, security, peer influence, technology adoption), rather than describing each article separately.
- 3.3. Write a conclusion that summarizes key findings and identifies one simple research gap, such as limited research on students in Vietnam or differences between urban and rural students.
- 3.4. Use simple academic English and include basic in-text citations (Author, Year).
